ANOTHER DRYVac™ INSTALLED!

TESCO DOES IT AGAIN WITH ITS SYMEX Americas, LLC DIVISION

Another successful DRYVac™ installation; another satisfied customer!

TESCO's is proud of this latest vapor control system installation. It exemplifies TESCO's willingness to go the extra mile to create a vapor recovery system that is ...

- Smaller
- Simpler
- Smarter
- And, much more efficient

It's better than vapor recovery systems of the past! TESCO, through its SYMEX Americas division, has completely revamped the concept of vapor recovery, using its 21st century Flo-Max™ activated carbon, electronic transmitters that communicate with a powerful Proc-

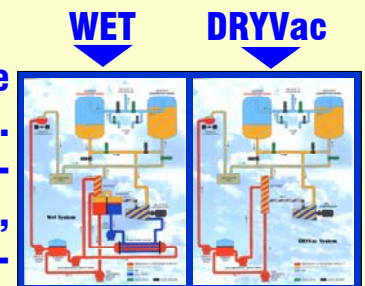

ess Logic Controller and a dedicated color screen PC HMI, and brand new, totally innovative software.

This system was designed to do the same old job while using far less energy, and it does. Just the energy savings alone pays for the DRYVac™ system several times over throughout its 30+ year lifetime.

In addition, the system is so simple and reliable that it stays up and running better than vapor combustion systems, which are sometimes selected in lieu of vapor recovery systems to maximize terminal uptime. DRYVac™ reverses this trend with even less downtime.

And there's the issue of maintenance. DRYVac™ has no liquid ring compressor, no glycol, no heat exchanger, no seal fluid separator, no seal fluid pump, and no Brooks valve. DRYVac™ is so much simpler that maintenance is almost a non-issue.

(Continued from first page)

The smarter the system the more time and money you save. That's why we all use Pentium computers and Microsoft software in our offices. DRYVac takes advantage of this concept too. Its instruments communicate with its operating computer. Its ESP™ software predicts conditions and manages the entire system as if you were there 24 hours a day doing it by hand! When it doesn't need to run, it shuts down, saving energy, wear, and tear. When you load diesel, it knows! So, it increases the regen vacuum level to pull off the heavier hydrocarbons, extending carbon life indefinitely compared to older systems. Dry compressors make this possible, since they do not lose capacity over

time like all liquid ring pumps. Sure, dry compressors cost more, but the savings offset the costs in short order.

In today's world we all know you get what you pay for. So, if your old system needs modernizing, why retrofit with add-ons? If it needs replacing, step up to DRYVac™ and join the over 130 customers who see this system as the new industry standard because, while it costs a little more to purchase, it ...

- Reduces energy costs by 30-60%
- Reduces maintenance
- Reduces compressor replacements
- Reduces carbon replacements
- Reduces downtime

Call us at 317-872-4321 or 800-276-7152 to see if DRYVac™ is right for you.
