## Wholesale Gasoline Price Erupts

### ***\$3-4/Gallon Gasoline Prices Can Crate Big Changes***

Terminals have NEVER before stored so many dollars worth of product ... not ever! Inventory controls are tighter than ever. Every drop counts!

That's where we come in. You see, we produce the world's most sophisticated, most efficient process to recover gasoline that would otherwise be lost. A small 500,000 gallon per day terminal stands to bank \$450,000 per year worth of recovered gasoline with our DRYVac™ Vapor Recovery System. Project the value of gasoline into the future and you do the math ... the savings are enormous.

### ***Rules Have Changed. Go Green!***

With product prices at all time highs it makes more and more sense to "go green". In the old days we burned vapors because it was easier than recovery. Now, at today's prices, more and more terminal owners are returning to

vapor recovery.

### ***Recovering Gasoline: It's Never Been So Reliable!***

Vapor recovery systems languished technically for decades, with few meaningful improvements. Until DRYVac, that is. DRYVac systems broke new ground. Dry vacuum pumps, complete instrumentation, and system self-managing software resulted in a reliability factor better than any other system from any other company. Yes, even better than vapor combustors! With the reliability issue settled once and for all, there's just no good reason to stay with vapor combustion. It costs you year after year, never returns a dime, and contributes to global warming.

### ***Join The Growing List of Satisfied Customers!***

The list continues to grow. Three or four satisfied customers every year

since we first introduced DRYVac. This year we shipped two more systems to the China to help mitigate the terrible air pollution in and around Beijing. They'd tried a Jordan wet VRU, but dissatisfied, they quickly switched to DRYVac. We shipped another system to Puerto Rico, and will ship another to the St. Louis area before the year ends.

No other system comes close to DRYVac. Sure, Zink and Jordan offer dry VRU systems, but none comes close to the user friendly DRYVac. It's full compliment of instrumentation and the ESP software that make DRYVac

shine. We invite you to get on the band wagon and join the growing list of very satisfied customers!

### Let Us Survey Your Terminal!

It only makes sense. If you know how much you stand to gain with a DRYVac System you might encourage your owner to buy one. We're prepared to find out for you! We have a data gathering system designed to monitor your operations 24/7. It's fully automated, so it's a cheap and easy way to find out for sure. Just give us a call us to arrange your survey today.

Call Mark or Tim toll free at 1-800-276-7152 or direct at 317-872-4321.
